rajat.bhagat@gmail.com | 213-442-6340 | Chicago, USA | [Linkedin](#) | [Github](#)

EDUCATION

Northeastern University, Boston

Master's in Computer Science

Aug 2021 - May 2023

GPA: 4.0

SKILLS

Languages: Java, Python, Typescript, JavaScript, Terraform, Ansible, C
Web and Frameworks: Spring Boot, Node JS, React JS, Redux, NextJS, Django, Junit
Databases: Snowflake, PostgreSQL, Oracle Database, MySQL, MongoDB
Other Tools: AWS, Kafka, OpenShift, Oracle Cloud, Kubernetes, Docker, Jenkins, Git, JIRA, Linux

PROFESSIONAL EXPERIENCE

Discover Financial Services

Chicago, US

Application Engineer

Apr 2024 – Present

- Spearheaded development and enhancement of a Python-based microservice - Config Manager, used for orchestrating artifact generation and deployment of over 200,000 artifacts
- Enhanced custom reconciliation framework using Python to enable users to define reusable validation controls, reducing manual effort and improving data quality assurance across 400 data pipelines
- Led testing and integration efforts of multiple source systems coordinating with 5 cross-functional teams to ensure seamless deployment and post-launch enhancements
- Maintained and enhanced legacy Java-based Universal Data Loader, processing 1M+ records daily, by debugging issues and supporting AWS component integrations
- Implemented OpenShift Cloud Platform (OCP) deployments using Helm charts and Docker via custom Jenkins CI/CD pipelines for 15 microservices improving overall platform stability

Mythics LLC

Arlington, US

Cloud Developer

Jun 2023 – Mar 2024

- Developed a real-time cloud cost monitoring portal using NextJS, NodeJS, and Redux reducing cloud expenses by 20%
- Improved portal performance through Redis data caching, reducing wait time from 1 min to 2 sec, and enabled scalability by deploying code on Kubernetes instance as Docker images
- Automated patching of Oracle Exadata machines using Ansible playbooks saving 8+ hours of manual effort quarterly
- Deployed a Jenkins pipeline triggered by JIRA ticket transitions, reducing patching time by 60% and enabling parallel patching
- Orchestrated the provisioning of OCI resources for 4 customers using Terraform, automating and streamlining the process

JP Morgan Chase

Mumbai, India

Software Engineer II

Jul 2018 - Jul 2021

- Led development of a Trade Inquiry Chatbot on Symphony, employing Java Spring Boot to decrease manual inquiries by 40%
- Spearheaded automation of loan claim transactions and devised a new portal using ReactJS reducing manual intervention and achieving a 60% automation rate
- Led a team of 3 developers to create a document data extraction service in Python extracting over 40 crucial data points for automating transactions
- Implemented a document digitization application with 5 Java microservices, processing over 700 transactions daily
- Created a Java audit service to monitor transaction processing, ensuring accurate tracking and reporting of processing status
- Engineered the NLP service in Java Spring Boot, utilizing Apache OpenNLP and custom models to attain 99% accuracy in extracting crucial keywords and codes from documents
- Designed a user-friendly frontend UI with ReactJS and Redux to review NLP extracted data, emphasizing efficient interaction
- Established Kafka as the communication medium between microservices and a storage solution for messages
- Delivered 20 production releases, coordinating with sister teams and clients to ensure a smooth cutover

CERTIFICATIONS AND ACHIEVEMENTS

- AWS Certified Solutions Architect Associate (2025)
- Oracle Cloud Infrastructure Associate Architect and Cloud Developer Professional (2023)
- Received Impact Award for 2 consecutive years for exceptional contributions at JP Morgan Chase
